

## E. Minimum Modular

time limit per test: 2 seconds  
memory limit per test: 256 megabytes  
input: standard input  
output: standard output

You have been given  $n$  distinct integers  $a_1, a_2, \dots, a_n$ . You can remove at most  $k$  of them. Find the minimum modular  $m$  ( $m > 0$ ), so that for every pair of the remaining integers  $(a_i, a_j)$ , the following inequality holds: .

### Input

The first line contains two integers  $n$  and  $k$  ( $1 \leq n \leq 5000, 0 \leq k \leq 4$ ), which we have mentioned above.

The second line contains  $n$  distinct integers  $a_1, a_2, \dots, a_n$  ( $0 \leq a_i \leq 10^6$ ).

### Output

Print a single positive integer — the minimum  $m$ .

### Examples

<b>input</b>
7 0 0 2 3 6 7 12 18
<b>output</b>
13
