

A. Translation

time limit per test: 2 seconds

memory limit per test: 256 megabytes

input: standard input

output: standard output

The translation from the Berland language into the Birland language is not an easy task. Those languages are very similar: a berlandish word differs from a birlandish word with the same meaning a little: it is spelled (and pronounced) reversely. For example, a Berlandish word `code` corresponds to a Birlandish word `edoc`. However, it's easy to make a mistake during the «translation». Vasya translated word s from Berlandish into Birlandish as t . Help him: find out if he translated the word correctly.

Input

The first line contains word s , the second line contains word t . The words consist of lowercase Latin letters. The input data do not consist unnecessary spaces. The words are not empty and their lengths do not exceed 100 symbols.

Output

If the word t is a word s , written reversely, print `YES`, otherwise print `NO`.

Examples

input
<code>code</code> <code>edoc</code>
output
<code>YES</code>

input
<code>abb</code> <code>aba</code>
output
<code>NO</code>

input
<code>code</code> <code>code</code>
output
<code>NO</code>
