## C. Dijkstra?

time limit per test: 1 second memory limit per test: 64 megabytes input: standard input output: standard output

You are given a weighted undirected graph. The vertices are enumerated from 1 to n. Your task is to find the shortest path between the vertex 1 and the vertex n.

## Input

The first line contains two integers n and m ( $2 \le n \le 10^5$ ,  $0 \le m \le 10^5$ ), where n is the number of vertices and m is the number of edges. Following m lines contain one edge each in form  $a_i$ ,  $b_i$  and  $w_i$  ( $1 \le a_i$ ,  $b_i \le n$ ,  $1 \le w_i \le 10^6$ ), where  $a_i$ ,  $b_i$  are edge endpoints and  $w_i$  is the length of the edge.

It is possible that the graph has loops and multiple edges between pair of vertices.

## **Output**

Write the only integer -1 in case of no path. Write the shortest path in opposite case. If there are many solutions, print any of them.
