## A. Maximum Increase

time limit per test: 1 second memory limit per test: 256 megabytes

input: standard input output: standard output

You are given array consisting of n integers. Your task is to find the maximum length of an increasing subarray of the given array.

A subarray is the sequence of consecutive elements of the array. Subarray is called increasing if each element of this subarray **strictly greater** than previous.

## Input

The first line contains single positive integer n ( $1 \le n \le 10^5$ ) — the number of integers.

The second line contains *n* positive integers  $a_1, a_2, ..., a_n$   $(1 \le a_i \le 10^9)$ .

## **Output**

Print the maximum length of an increasing subarray of the given array.

## **Examples**

```
input
5
1 7 2 11 15
output
3
```

```
input
6
100 100 100 100 100 100

output
1
```

```
input
3
1 2 3
output
3
```
